

Assignment and Assumption Form

Selling your home? This will help make transferring your Base battery to the buyer as smooth as possible.

A FEW IMPORTANT THINGS TO KNOW

-  **Introduce us to the new homeowner!** Please tell the buyer that the battery belongs to Base and that we'll be in touch with them directly — the contact info you enter here helps us do that.
-  **If they don't want the battery, we need your help to recover it.** We hope you enjoyed your Base battery while you lived in your home! Now that you're moving, we need your help to recover the battery—unless the buyer wants it—so you can avoid any charges.
-  **We need at least 90 days' notice.** Your Battery Services Agreement requires you to give Base at least 90 days' notice before your home sale closes — that allows us to contact the buyer before you close, to find out if the buyer wants to keep the battery or have Base pick it.
-  **We'll try to remove the battery before closing, unless the buyer wants it.** We'll do everything we can to work with you and the buyer to remove the battery before closing if the buyer doesn't want it.
-  **There is a substantial cost associated with a stranded battery.** If we can't reach the buyer and the battery is still at the home after closing, you may be responsible for the full cost of the system — potentially over \$10,000 per battery. It is very important we get in touch with the buyer to avoid this scenario.

Fill out this form and send it to support@basepowercompany.com, or email us the same info with “Battery Transfer” in the subject line. Thanks for keeping us in the loop!
